

The Embryology, Anatomy and Histology of the Eye (Paperback)

Filesize: 5.64 MB

Reviews

This ebook is wonderful. Of course, it really is perform, nevertheless an interesting and amazing literature. Its been printed in an extremely straightforward way and it is simply after i finished reading this ebook where in fact changed me, modify the way i believe.

(Prof. Maxwell Stracke)

To download **The Embryology, Anatomy and Histology of the Eye (Paperback)** eBook, make sure you refer to the button beneath and download the file or have access to other information which are relevant to THE EMBRYOLOGY, ANATOMY AND HISTOLOGY OF THE EYE (PAPERBACK) book.

Theclassics.Us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 edition. Excerpt: .the optical axis. These two refracted rays cross each other at b and this is the position of the focus of the luminous point 1. It will be noticed that we can draw a ray from 1 through the point o which on prolonging meets the other two rays at b; that is, this ray is not refracted. The point o is called the nodal point and may be defined as a point in the lens of such a nature that a ray of light going towards it is not refracted in passing through the lens. If the position of the image of an object is desired, we proceed in the same manner as above. From Fig. 8 it will be seen that the image of a convex lens is a real and inverted image. All convex lenses do not have the same focal distance; that is, they do not have the same refractive power. The greater the optical density of a lens, the greater the refractive power. The density of a medium is called its index of refraction. Again two lenses of the same material and therefore of the same index of refraction, do not necessarily have the same power of refraction. This depends upon the degree of curvature, or, in better words, upon the radius of curvature; the shorter the radius, the greater the refractive power. Hence the law, the refractive power of a lens varies directly as the index of refraction...
